

Rodent Deterrent Strobe Light

Proven to be a positive and humane method of deterring rats, bats, squirrels, skunks, raccoons and birds from dark and remote areas where they like to hide and live.

Are mice and other rodents getting into your station, creating damage to wiring and other electrical parts?

Protect your business and property from damage by utilizing our flashing light. The high intensity pulsating light affects the ciliary muscle in the eyes of these pests such that they cannot tolerate its continuous strobing.

- Best Placement in dark areas.
- Effective within an open area up to 900 sq ft.
- 18-24 month bulb life when used 24/7.
