GFI Notify Systems

Thank You for Your Order of GFI Notify!

Your new smartplugs are enclosed. Please install them according to the separately enclosed directions. When complete, log in to our website (GFI Notify.com/login) using your computer or mobile device. Next, enter the Username and Password shown above.

1. Once you're logged in, enter the email address you used when you signed up with the GFI Notify Mobile App and click "Link Account". If successful, your GFI Notify smartplugs will appear on the dashboard.
2. You are now ready to configure your account. Click "Notifications" on the left menu. You may enter your Time Zone and your desired Notification Interval. All fields save automatically.
3. For your contacts, enter up to 3 email addresses and up to 3 cell phone numbers. When done, click on Test to the right of each contact.
4. Test GFI Notify by removing a monitored plug from the outlet. Keep the smartplug unplugged until you receive the notification. If you remove all of the plugs at the same time, you will be notified that the entire house has lost power. After you receive the power out notifications, plug the smartplugs back into their outlets. You will get power restored notifications in about 3.5 minutes.
5. The final step is to plug the smartplugs into their final destinations. The smartplug can be plugged into any open outlet on the same circuit you are monitoring. Do a final test to make sure that your wifi signal is adequate.

You can expect to receive up to 6 notifications (email and text at the same time), 20 minutes apart, up to 1 hour. The power restored message is sent just once.

Thanks very much,

A handwritten signature in black ink, appearing to read "George Bein".
