

**Your home is 85% more likely to be
damaged by water than by fire. **Alarmed?****

Water: The silent destroyer

Drywall. **Carpeting.**
Wood. **Plaster.** Fiberglass insulation.

Your home is made of these materials. All it takes to destroy any of these elements is a little water. Water corrodes, rots and provides a fertile breeding ground for illness-causing bacteria and mold. Yet your home is surrounded by water. The relentless forces of nature

pound on your home's exterior. And hundreds of feet of pipes carry water to almost every room inside your home. Every minute of every day your home is at risk. Detecting water problems before they cause damage is essential to keeping your home protected and healthy.

Protect Your Home with the Water Alarm™

The Water Alarm™ has been developed to detect even the smallest amounts of water before damage can occur. Placing water alarms in critical spots throughout your home can go a long way to ensure your home will be protected from the expense and destruction of water damage.

- Simple installation—set anywhere problem moisture could occur
- Safe to use around children and pets
- Very affordable—buy enough units to protect your entire home for less than your insurance deductible
- One-year warranty
- Extra-loud alarm sounds at 110 db for up to 72 hours
- Outer shell constructed of durable ABS plastic
- Operates on a standard 9-volt battery (not included)
- Low battery warning—chirps when battery is low
- Long battery life—new batteries required once a year
- Sensors detect even small amounts of moisture before damage can occur; no standing water required
- Sensors are stainless steel—will not corrode or stain
- Completely electronic—no moving parts to fail or wear out
- Remote sump and hot tub adapter available

Where to Use the Water Alarm™

The Water Alarm™ is small and discreet enough to use in every and any problem spot in your home.

- Washing machine leaks are some of the most common—and most destructive; the Water Alarm™ is essential even with an overflow tray

- A leaky or overflowing toilet can cause major floor, wall and cabinetry damage

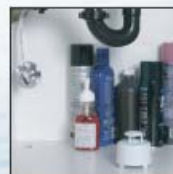

- Keep a Water Alarm™ near your water line's main valve
- Use the Water Alarm™ anywhere problems might occur

- Eliminate water heater bursts by detecting moisture at the first sign of leakage

- Dishwasher leaks are far too common and often go unnoticed until they ruin floors and cabinetry

- Even a few drops from pipes under leaky sinks or disposal units can rot whole sections of expensive cabinetry

Get Your Water Alarm™ Now

Water does the most damage to homes when it goes undetected. Don't let another day go by without the peace-of-mind a house protected by the Water Alarm™ can bring.

More homes are damaged by water than fire every year

- According to The Insurance Information Institute claims from water damage reach more than \$4 Billion in the U.S. on an annual basis
- The average loss per home is nearly \$3000.
- The leading causes of water damage are leaky appliances, overflowing toilets, baths and sinks, old or frozen pipes, roots in pipes, sump pump malfunctions, and leaky roofs
- Washing machine hose failures alone account for more than \$150 million in annual damage
- 5 million water heaters leak or burst every year
- Every year more than 250,000 families have their homes ruined and their lives overturned by severe water damage and the subsequent repairs
- Will your home be next?
